

❄️ Lincare x Snowflake SnowDay

CONFIDENTIAL

Hands-On Lab — Platform Overview

A full-day technical session demonstrating how Snowflake unifies Lincare's claims, sales, and call center data into a single governed platform — replacing siloed tools and unlocking AI-powered analytics.

\$4.1B

Revenue at Stake for Lincare

With a 17% claims denial rate and 700 locations running disconnected systems, Lincare has significant revenue and efficiency gains available. This SnowDay demonstrates exactly how Snowflake addresses all three pain points — in a single, governed platform.

Three Use Cases We Will Build Together

USE CASE 1

Denials Reduction

End-to-end pipeline from raw claims to predictive denial prevention. Root cause analysis across 700 locations, payer breakdown, and appeal recovery tracking.

⚡ Reduce 17% → <5% denial rate

USE CASE 2

Sales Data Analysis

Blend internal CRM activity with CMS Medicare market data to reveal territory gaps, market penetration, and true addressable market per rep.

⚡ Identify uncaptured referral opportunity

USE CASE 3

Call Center Consolidation

Unify call records from Avaya, Five9, and RingCentral into a single view. SLA monitoring, agent performance, and cross-domain correlation with denials.

⚡ Unified view across 700+ centers

What We'll Work With — Q1 2026 Dataset

50K Claims Submissions	8,459 Denied Claims	100K Call Records (3 systems)	700 Operating Centers
12K Physician Referrals	30K CMS Market Records	500 FHIR R4 Resources	224K+ Total Records

Session Agenda (75–90 Minutes)

1 Environment Setup Database, schemas, roles, warehouses	2 Data Loading COPY INTO — 224K records in minutes
3 Dimensional Modeling Star schema transforms in SQL	4 HIPAA Governance Dynamic masking, row access, PHI tagging
5 Compute Scaling Per-second billing, auto-suspend demo	6 Dynamic Tables Bronze → Silver → Gold pipeline, no DAGs
7 Domain Analytics Denials, sales, call center KPI views	8 Marketplace Integration CMS Medicare data, zero ETL
9 Semantic View Natural language → SQL (Cortex Analyst)	10 Cortex Search RAG over 10 policy documents
11 Intelligence Agent Combined AI over data + docs	12 Streamlit Dashboard 5-tab KPI app with embedded AI chat
13 FHIR R4 Pipeline EHR data ingestion via VARIANT + LATERAL FLATTEN	14 Explore & Q&A Free exploration, cross-domain queries

Snowflake Features Demonstrated

#	FEATURE	WHAT IT DEMONSTRATES	TAGS
1	Dynamic Tables	Declarative medallion pipeline (Bronze/Silver/Gold) — no orchestration needed	Pipeline
2	Cortex Analyst (Semantic View)	Natural language to SQL — native SQL object, zero infrastructure	AI
3	Cortex Search	RAG over unstructured policy documents — built-in, no external service	AI
4	Snowflake Intelligence Agent	Combined Analyst + Search — one CREATE AGENT DDL	AI
5	Streamlit in Snowflake	Multi-tab KPI dashboard with embedded AI chatbot — governed, no BI tool	AI
6	Snowflake Marketplace	CMS Medicare utilization data — zero ETL, always fresh	Data Sharing
7	RBAC + Dynamic Data Masking	HIPAA-compliant PHI masking by role — instant, unified	Governance
8	Row Access Policies	Location-based data filtering — single policy engine	Governance
9	Data Classification Tags	PHI/PII/FINANCIAL tagging for compliance audits	Governance
10	Time Travel + Access History	90-day audit trail for Medicare compliance	Governance
11	Multi-Cluster Warehouses	Auto-scale 1–5 clusters for concurrent dashboard users	Compute
12	Per-Second Billing + Auto-Suspend	Zero cost when idle (60s auto-suspend)	Cost
13	Resource Monitors	Credit quotas with automatic suspend triggers	Cost
14	Semi-Structured Data (VARIANT)	Native EDI 835/837 and JSON CDR handling — no flattening pipelines	Data
15	COPY INTO (Bulk Loading)	Parallel loading with auto-scaling	Data
16–18	Stages, Star Schema, Cross-Domain	Secure staging, dimensional modeling, unified analytics	Data
19	FHIR R4 Pipeline	EHR data ingestion via LATERAL FLATTEN — clinical joins to claims data	Data

Why Snowflake vs Microsoft Fabric / Databricks

❄️ Snowflake

- COPY INTO data
- CREATE DYNAMIC TABLE
- CREATE SEMANTIC VIEW
- CREATE AGENT
- Streamlit App (native)

**5 steps — same
platform**

🏠 Microsoft Fabric

- OneLake + Data Factory
- Synapse SQL Pool
- Power BI Semantic Model
- Azure AI Search
- Azure OpenAI
- Copilot Studio
- Power Apps

7 services — weeks

🔹 Databricks

- Unity Catalog + Ingest
- Delta Live Tables (notebook)
- SQL Warehouse
- Vector Search Index
- Embedding Model Deploy
- Mosaic AI Agent
- External App

**7 steps — multiple
services**

Key Talking Points for Lincare

TOPIC	LINCARE-SPECIFIC VALUE
Denial Revenue Recovery	A 1% improvement in denial rate across 50K monthly claims = millions in protected revenue annually. Snowflake tracks this at full granularity — payer, location, denial code, date.
Medicare Compliance	Lincare has faced past regulatory scrutiny. Snowflake's 90-day Time Travel, Access History, and row-level security provide the audit trail required for CMS compliance — out of the box.
CMS Market Intelligence	Snowflake Marketplace gives sales reps access to Medicare prescribing data by geography — revealing physicians sending 100% of referrals to competitors without any ETL pipeline.
Call Center Consolidation	Avaya, Five9, and RingCentral all output different CDR formats. Snowflake's VARIANT type ingests all three natively — one COPY INTO replaces three custom parsing pipelines.
AI — No Infrastructure	The Intelligence Agent (Cortex Analyst + Cortex Search) is deployed with a single CREATE AGENT DDL. No GPU clusters, no vector databases, no model endpoints to manage.
Cross-Domain Insight	When denials spike, billing inquiry calls spike too. This correlation — only possible on a unified platform — lets Lincare predict staffing needs and patient churn proactively.
